

## Physical Learning Activities

Our portfolio of physical activities focuses on generating evidence of key skills attainment.

### Some of Our Physical Learning Activities:

#### Touching Stars

You are a group of astronomers who seek to get as close as possible to the stars! Every member of your team must climb the ladder, reach as high as they can and thus get closer to the stars as possible!

Key skills:

- Working with others
- Improving own learning and performance

#### Cliff Hanger

Your team is looking after the survival of a species of eagle that has very particular feeding habits. You must fill the bird feed with as much food as possible to help protect the species. There's only one problem the bird feed is suspended at the end of a treacherous cliff...

Key skills:

- Working with others
- Problem solving

#### Eagles Nest

You are a group of biologists trekking through a forest who have come across an eagle's egg that has fallen from the nest. Remarkably it is still intact! Your sense of duty compels you to return the egg to the nest. Unfortunately the nest is above a bottomless pit – you must work out a way to get the egg back to the nest!

Key skills:

- Problem solving
- Working with others
- Communication

"We genuinely experienced problem solving and communication through Boulders' team activities"

Roger Wood, Natwest
